Introduction 1/

The San Francisco-Oakland Area is 1 of 40 major labor markets in which the Bureau of Labor Statistics is currently conducting occupational wage surveys. Occupations common to a variety of manufacturing and nonmanufacturing industries were studied on a community-wide basis. Cross-industry methods of sampling were thus utilized in compiling earnings data for the following types of occupations: (a) office; (b) professional and technical; (c) maintenance and power plant; (d) custodial, warehousing, and shipping. In presenting earnings information for such jobs (tables A-1 through A-4) separate data have been provided wherever possible for individual broad industry divisions.

Occupations characteristic of particular, important, local industries were studied on an industry basis, within the framework of the community survey. 2/ Earnings data for these jobs have been presented in Series B tables. Union scales (Series C tables) are presented in lieu of (or supplementing) occupational earnings for several industries or trades in which the great majority of the workers are employed under terms of collective bargaining agreements, and the contract or minimum rates are indicative of prevailing pay practices.

Data were collected and summarized on shift operations and differentials, hours of work, and supplementary benefits such as vacation and sick leave allowances, paid holidays, non-production bonuses, and insurance and pension plans.

The San Francisco - Oakland Metropolitan Area

The San Francisco-Oakland Metropolitan Bay Area (Alameda, Contra Costa, Marin, San Francisco, San Mateo, and Solano Counties) had a combined population of more than 2,300,000 in January 1952. About 800,000 lived in San Francisco and 600,000 in Oakland.

Wage and salary workers (excluding those in agricultural pursuits) in the Bay Area numbered approximately 1,000,000. Manufacturing establishments employed about 172,000 workers in January 1952. Two-fifths of these were engaged in the smelting and refining of ferrous and nonferrous metals and the fabrication of these metals into finished products, such as tin cans, hardware, structural steel, machinery, and transportation equipment. At the time of the survey the food industries employed a fifth of the manufacturing workers. Other important manufacturing industries were printing and publishing with 16,000 workers, chemical and petroleum products with 12,000 workers each, and apparel with 7,000 workers. The paper and allied products, furniture and fixtures, and stone, clay, and glass products industries, as a group, gave employment to another 16,000.

Of the 670,000 wage and salary workers in nonmanufacturing industries, almost 200,000 were in wholesale and retail trade. The service industries gave employment to 145,000, and a labor force of 100,000 was utilized in transportation (including railroads), communication, and other public utilities. Finance, insurance, and real estate establishments accounted for 52,000 workers. The building construction industry employed 57,000.

Navy shipyards had 26,000 workers. Other government employment—Federal, State, and local—totaled slightly less than 100,000.

Among the industry and establishment-size groups included in the Bureau's study, virtually all plant workers in manufacturing, public utilities, and wholesale trade were in establishments having written contracts with labor organizations. In retail trade and the service industries, 90 percent of non-office workers were employed under union contracts. Collective bargaining in the area is typically of the multiemployer, industry-wide, master agreement type.

Although only 15 percent of the office workers within the scope of the study were employed in establishments which
had signed union agreements applying to such workers, this
ratio was relatively high for office workers. With the exception of the railroad industry in which all employees were
represented by unions, the public utilities group, with 60 percent of office workers covered by agreements, was the highest
organized among the industry groups studied.

^{1/} Prepared in the Bureau's regional office in San Francisco, Calif., by William P. O'Connor under the direction of John L. Dana, Regional Wage and Industrial Relations Analyst. The planning and central direction of the program was carried on in the Bureau's Division of Wages and Industrial Relations in Washington, D. C.

^{2/} See appendix for discussion of scope and method of survey.

Occupational Wage Structure

Bay Area wages and salaries were formally adjusted upward for 50 percent of office workers and 60 percent of plant workers between January 1951, the date of the Bureau's last comprehensive wage study in the area, and January 1952. Formal increases for office workers were generally \$2 a week or more. Although only half the office workers were participants in general or across-the-board gains, many more were advanced on an individual or informal basis. This resulted in typical average salary increases of 3 to 5 percent for office workers. Among plant workers, formal wage increases of 5 cents or more an hour were common, and contributed to general gains of 5 to 8 percent in average hourly earnings.

Formalized rate structures for time-rated plant workers were almost universal in the Bay Area. Only in the service industries group, where about 10 percent of the workers were employed in establishments which set rates on an individual basis. was there any significant variation from the widespread pattern. The single-rate system predominated in most industry groups with three-quarters of all plant workers employed in establishments having this rate structure plan. The only variant was the public utilities group. Three-fourths of the plant workers in this industry group were employed in establishments which provided a range of rates for individual occupations. Among office workers, nearly two-thirds were employed in establishments using formal structures of the rate-range type. In most other establishments, salaries were determined on an individual basis. A small number of office workers were employed in establishments with single rates established for each office occupational classification.

Established minimum entrance rates for inexperienced plant workers were part of the formalized rate structures in nearly all Bay Area establishments. On an all-industry basis, more than half the workers were in establishments having minimum starting rates above \$1.25 an hour. The range of minimum rates was from under 80 cents to over \$1.70, with the higher rates generally prevailing in manufacturing and wholesale trade.

Wages and salaries of workers in manufacturing industries were generally higher than those of workers in nonmanufacturing. In 42 of the 64 job classifications permitting comparison, pay rates of workers in manufacturing, both in office and plant, averaged more than in nonmanufacturing establishments. However, among the nonmanufacturing industries workers in the public utilities and wholesale trade groups were paid average rates comparable to those paid to workers in manufacturing.

More than 20 percent of all manufacturing workers in January 1952, were employed on late shifts. Nearly all of these workers received premium rates of pay. Most common second-shift differentials were 5-cents-an-hour or 10-percent additions to day rates; third-shift workers commonly were paid hourly shift differentials of either 6 or 10 cents. In the machinery industry, differentials were on a percentage basis, with the second-shift workers receiving a 10-percent premium and the third-shift a 15-percent premium.

About three-fourths of women office workers were on a 40-hour weekly schedule. Very few worked longer hours, but in the finance group almost half the women worked less than 40 hours a week. The 40-hour workweek was even more common for plant workers, more than 90 percent working those hours.

A: Cross-Industry Occupations

Table A-1: Office Occupations

The study covered establishments with more than 20 workers engaged in the manufacture of candy and other confectionery products (Group 2071) as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget. Data relate to a November 1951 payroll period.

2/ Excludes premium pay for overtime and night work; all or a majority of workers in each occupation were paid on a time basis.

The study covered regular (inside) shops with 8 or more workers in part of industry group 2337 as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget. Establishments manufacturing fur coats or single skirts were excluded from the study. Data relate to a September 1951 payroll period.

2/ Excludes premium pay for overtime and night work.

3/ Insufficient data to warrant presentation of separate averages by method of wage payment.

(a) All or predominantly time workers.

(b) All or predominantly incentive workers.

^{1/} The study covered establishments engaged in the manufacture of domestic and industrial oil burners (Group 3432) and nonelectrical heating and cooking apparatus (Group 3439) as defined in the Standard Industrial Classification Manual (1945 edition) prepared by the Bureau of the Budget. Data relate to a November 1951 payroll period.

2/ Data limited to men workers; all or a majority of workers in each occupation were paid on a time basis.

2/ Excludes premium pay for overtime and night work.

1/ The study covered Insurance Carriers (Group 63) as defined in the Standard Industrial Classification Manual (1949 edition) prepared by the Bureau of the Budget. Data relate to an October 1951 payroll period.

2/ Hours reflect the workweek for which employees receive their regular straight-time salaries and the earnings correspond to these weekly hours.

3/ Workers were distributed as follows: 9 at \$100.00 - \$105.00; 14 at \$105.00 - \$110.00; 4 at \$110.00 - \$115.00; 10 at \$115.00 - \$120.00; 2 at \$120.00 - \$125.00; 20 at \$125.00 - \$130.00; 13 at

(Minimum wage rates and maximum straight-time hours per week agreed upon through collective bargaining between employers and trade-unions. Rates and hours are those in effect on dates indicated.)

1/ All ratings receive \$7.50 per month clothing allowance which is included in the basic rates shown. All ratings of unlicensed departments also receive additional payment in accordance with conditions as follows:

 On vessels carrying explosives in 50-ton lots or over, 10 percent of basic monthly wages is added while such cargo is aboard, or is being loaded or unloaded.

 On vessels carrying sulphur in amount of 25 percent or more of dead weight carrying capacity, \$10 per voyage is added.

3. On vessels operated in described areas of China coastal waters, 75 percent or 100 percent of daily basic wages, including allowances in lieu of overtime for Sunday day men, is added according to degree of proximity to the China coast and adjacent areas rendered unsafe by hostilities.

2/ The maximum straight-time hours which may be worked per week at sea. The maximum straight-time hours which may be worked per week in port are 40 for both day men and watch men. The basic workweek at sea is 56 hours. Deck department watch men are paid 8 hours at overtime rates; deck department day men are paid 12 hours, and engine-room department day men and watch men are paid 16 hours at overtime rates.

2/ The maximum straight-time hours which may be worked per week both at sea and in port. At sea, the basic workweek for members of the stewards department is 56 hours with 12 hours being paid at the overtime rate.

Appendix - Scope and Method of Survey

With the exception of the union scale of rates, information presented in this bulletin was collected by visits of field representatives of the Bureau to representative establishments in the area surveyed. In classifying workers by occupation, uniform job descriptions were used; these are available upon request.

Six broad industry divisions were covered in compiling earnings data for the following types of occupations: (a) office clerical, (b) professional and technical, (c) maintenance and power plant, and (d) custodial, warehousing, and shipping (tables A-l through A-4). The covered industry groupings are: manufacturing; transportation (except railroads), communication, and other public utilities; wholesale trade; retail trade; finance, insurance, and real estate; and services. Information on work schedules and supplementary benefits also was obtained in a representative group of establishments in each of these industry divisions. As indicated in the following table only establishments above a certain size were studied. Smaller establishments were emitted because they furnished insufficient employment in the occupations studied to warrant their inclusion.

Among the industries in which characteristic jobs were studied, minimum size of establishment and extent of the area covered were determined separately for each industry (see following table). Although size limits frequently varied from those established for surveying cross-industry office and plant jobs, data for these jobs were included only for firms meeting the size requirements of the broad industry divisions.

A greater proportion of large than of small establishments was studied in order to maximize the number of workers surveyed with available resources. Each group of establishments

of a certain size, however, was given its proper weight in the combination of data by industry and occupation.

The earnings information excludes premium pay for overtime and night work. Nonproduction bonuses are also excluded, but cost-of-living bonuses and incentive earnings, including commissions for salespersons, are included. Where weekly hours are reported as for office clerical, they refer to the work schedules (rounded to the nearest half-hour) for which the straight-time salaries are paid; average weekly earnings for these occupations have been rounded to the nearest 50 cents. The number of workers presented refers to the estimated total employment in all establishments within the scope of the study and not to the number actually surveyed. Data are shown for only full-time workers, i.e., those hired to work the establishment's full-time schedule for the given occupational classification.

Information on wage practices refers to all office and plant workers as specified in the individual tables. It is presented in terms of the proportion of all workers employed in offices (or plant departments) that observe the practice in question, except in the section relating to women office workers of the table summarizing scheduled weekly hours. Because of eligibility requirements, the proportion actually receiving the specific benefits may be smaller. The summary of vacation and sick leave plans is limited to formal arrangements. It excludes informal plans whereby time off with pay is granted at the discretion of the employer or other supervisor. Sick leave plans are further limited to those providing full pay for at least some amount of time off without any provision for a waiting period preceding the payment of benefits. These plans also exclude health insurance even though it is paid for by employers. Health insurance is included, however, under tabulation for insurance and pension plans.
